

LED Minilichter Eiszapfen

Jelitto Star

ILLUMINATIONEN

Our LED fairy lights "icicles" are 2 m wide and have hangers with different lengths from 30 cm to 70 cm.

In total, up to 15 chains can be coupled, which enables lighting up to 30 m. The chains serve primarily for the illumination of buildings. But also as overvoltage, especially in combination with other motifs, they give a beautiful picture.

Example across-streets:

The fairy lights were attached to a steel cable. Due to the regular and short distances overvoltages results in a sweeping, even and beautiful picture. A montage of fairy lights on aluminum struts facilitates the construction and dismantling tremendously.

Example building lighting:

The "icicle" light chain can be attached to the Gutter to be mounted. Through the holder of the gutter arises a good attachment distance. Since the gutters a certain distance to the House wall have, arises in addition indirect light, this enhances the effect the chains in addition.
